Clayne Cezclark Nable

09224618682 | n.cezclayne@gmail.com | City of Naga, Cebu, Philippines

SUMMARY

Full-stack developer with a Computer Engineering foundation, IBM-certified in Full Stack Development and Python for AI. Built a Django + React application end to end — REST APIs, authentication, CI/CD, Docker/Kubernetes deployment — and shipped projects spanning AI-integrated embedded systems (ESP32, Gemini API) to a self-hosted social platform architected across five cloud services at zero infrastructure cost. Comfortable owning a feature from database to UI.

EDUCATION

Bachelor of Science in Computer Engineering (BSCPE)
Cebu Institute of Technology - University

CERTIFICATIONS

- IBM Full Stack Developer Professional Certificate — Django + React capstone application with REST API integration, authentication, CI/CD (GitHub Actions), Docker & Kubernetes deployment
- IBM Developing AI Applications with Python and Flask

WORK EXPERIENCE

Quality Assurance Intern / 240 Hours OJT | *Arielus Software Inc.* Jun 2025 – Jul 2025

- Applied Python and Selenium to develop automated test scripts, improving test efficiency
- Gained hands-on experience with industry-standard QA processes in a professional development environment
- Applied Agile/DevOps methodologies and technical accounting terms to enhance cross-functional collaboration

PROJECT EXPERIENCE

Pykes | *Fullstack Developer* *Jul 2026 – Aug 2026*

- Designed a fan-out-on-write feed architecture (Redis sorted sets updated at write time) to avoid per-request database joins at read time
- Implemented JWT authentication with bcrypt password hashing, Redis-backed rate limiting, and a self-service password-reset flow engineered against account-enumeration attacks (identical API responses regardless of account existence)
- Wrote and maintained an 82-test automated suite (58 backend integration tests, 24 Playwright end-to-end tests) integrated into a GitHub Actions CI pipeline running on every push
- Architected and shipped a full-stack social platform (React 18/Vite frontend, Node/Express API, PostgreSQL, Redis) deployed across 5 free-tier cloud services (Cloudflare, Render, Neon, Upstash, R2) at zero infrastructure cost

RemGlove (ESP32 / Flutter) | *Embedded Systems / Backend Developer* Aug 2025 – May 2026

- Built a Flutter/Dart Android app with Firebase integration, real-time 3D rendering (Three.js), and AI-generated usage summaries via the Gemini API
- Engineered a gesture-controlled smart glove translating 15 static ASL configurations into wireless commands via flex sensors and ESP32, achieving 94% recognition accuracy across 150 trials
- Architected a multi-protocol system (BLE, MQTT/HiveMQ, IR/NEC) sustaining ≥95% BLE delivery to 8m and 100% IR reliability to 4m
- Implemented per-user calibration and dual hold-time scheme (800ms/2,000ms) enabling a universal-fit design

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript (ES6+), SQL, HTML/CSS, C++

Frontend: React, Vite, Flutter (Mobile), Three.js (3D Rendering), WebSocket (client), Canvas API, Responsive Design

Backend: Node.js, Express, Django, Flask, Firebase, REST API Design, WebSocket (ws), JWT Authentication, bcrypt

Databases: PostgreSQL, Redis (caching, rate limiting, pub/sub)

AI/ML & Embedded: Gemini API (LLM integration), ESP32, BLE, MQTT, IR/NEC protocols, Sensor Calibration

Testing: Node.js Test Runner, Selenium, Playwright (E2E), Unit/Integration Testing

DevOps & Cloud: Docker, Kubernetes, GitHub Actions (CI/CD), Cloudflare Workers/Pages, Render, Neon, Upstash, Cloudflare R2

Tools: Git, GitHub, npm, node-pg-migrate (database migrations), Claude Code
